

Q. Java generates hashcode for every object, find out what is the hash code in java and the purpose of generating the hash code.

~~Hash~~

Hashcode:-

32 bit integer value generated by the `hashCode()` method of `Object` class. Every java object has hashcode

→ used to represent an object as unique integer value. (diff objects can sometimes have same hash code, called collision)

→ By default ~~Object hash~~ Object hash Code() generates hash code based on object's memory identity.

Purpose:-

Generating and storing of objects

- Hash Map

- Hash Set

- Hash Table

- simple hash function

$\text{key} \bmod \text{size}^*$
